EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Thomas Spinelli on March 1, 2007.

The application has been amended as follows:

IN THE ABSTRACT

Replace the Abstract with the following:

--An endoscope inserting direction detecting system receives an endoscopic image, detects an endoscope inserting direction, in which an endoscope should be inserted, on the basis of the endoscopic image and produces information concerning the detected inserting direction. A plurality of detecting algorithms, each of which detect the inserting direction, are included and any of the plurality of detecting algorithms can be selected based on the endoscopic image.—

IN THE CLAIMS

Cancel claims **1-46** and **50-53**.

In claim **49**, line 1, replace "method" with --system--.

Art Unit: 3739

2. The following is an examiner's statement of reasons for allowance: This application is in condition for allowance except for the presence of claims directed to an invention non-elected without traverse. Accordingly, claims 1-46 and 50-53 have been cancelled. It is noted that claim 47 was erroneously included in the non-elected claims. That claim has been examined with claims 48 and 49.

All references of record show endoscope inserting direction detecting systems and methods (e.g., Gillies et al.(4,910,590) and Suzuki et al. (5,018,509)) that are based on the endoscope image. Although each reference utilizes a plurality of computations to obtain a insertion direction result, all computations are part of one detecting algorithm. Thus, the prior art of record fail to teach or suggest the combination of claim 48 including a detecting algorithm changing means for changing detecting algorithms, any of which the inserting direction detecting means adopts, according to the endoscopic image. Method claim 47 recites, *inter alia*, that a plurality of detecting algorithms are included in order to detect the inserting direction and any of such algorithms is selected based on the endoscope image. Claim 47 is thus allowable for the same reason as set forth above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
